SEQUENCE FROM N.A.
C. I SUBMITTED (NOY-1997) TO EMBL/GENBANK/DDBJ DATA BANKS.
C. I FUNCTION: THE AH RECEPTOR ACTIVATED IN ASSOCIATION WITH A LIGAND CASCOLATION. THE AH RECEPTOR OF THE GENES BY BINDING TO THE XRE ENGLENCE IN THEIR PROMOTER REGIONS. IT MEDIATES BIOCHEMICAL AND CASCOLECTION. THEIR PROMOTER REGIONS. IT MEDIATES BIOCHEMICAL AND CASCOLECTION. FIRST CYTOPLASMIC, UPON BINDING WITH LIGAND CASCOLECTION WITH A HSP90, IT TRANSLOCATES TO THE NUCLEUS.
C. SUBUNIT. EFFICIENT DNA BINDING REQUIRES DIMERIZATION MATH AN OTHER BHLH PROTEIN. IN THE NUCLEUS, HETERODIMER OF AHR AND ARNT.
C. I SIMILARITY: CONTAINS A PAS (PERR ARNT-SIM) DIMERIZATION DOMAIN.
C. I SIMILARITY: BELONGS TO THE BASIC HELIX-LOOP-HELIX (BHLH) FAMILY OF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This SWISS-PROT entry is copyright.                                                                       ò
                                                                                                                                                                                                   TETRAIN-SPRAGUE-DAWLEY; TISSUE-LIVER;

AL SUBMITTED (JAN-1994) TO EMBL/GENBANK/DDBJ DATA BANKS.

L SUBMITTED (JAN-1994) TO EMBL/GENBANK/DDBJ DATA BANKS.

- I- FUNCTION: THE AH RECEPTOR ACTIVATED IN ASSOCIATION WITH A LIGAND IS CONSIDERED TO TRANSLOCATE FROM CYTOPLASM TO NUCLEUS AND ENHANCE THE TRANSCRIPTION OF THE GENES BY BINDING TO THE XRE SEQUENCE IN THEIR PROMOTER REGIONS. IT MEDIATES BIOCHEMICAL AND TOXIC EFFECTS OF HALOGENATED AROMATIC HYDROCARBONS.

- I- SUBCELLULAR LOCATION: FIRST CYTOPLASMIC, UPON BINDING WITH LIGAND CONTINUES OF THE MEDIATES TO THE UNGLEUS.

- I- SUBCELLULAR LOCATION WITH A HSP90, IT TRANSLOCATES TO THE LUNG. THYMUS > KIDNEY > LIVER. LOWER LEVEL SEEN IN HEART AND SPLEEN.

- C THYMUS > KIDNEY > LIVER. LOWER LEVEL SEEN IN HEART AND SPLEEN.

- C SUBUNIT: EFFICIENT DNA BINDING REQUIRES DIMERIZATION WITH AN OTHER CONTINUES OF THE AND ARMY.

- C SUBUNIT: SEFICIENT ON BINDING REQUIRES DIMERIZATION POWARD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright. INTERCALARY AND MANDIBULAR SEGMENTS OF THE HEAD.

-!- DEVELOPMENTAL STAGE: FIRST EXPRESSED IN A STRIPE COVERING THE HEAD ANLAGEN OF THE SYNCITIAL BLASTODERN EMBRYO, PERSISTS THROUGH GASTRULATION AND DECAYS DURING GERM BAND EXTENSION. EXPRESSED LATER IN DEVELOPMENT IN A COMPLEX SPATIALLY RESTRICTED PATTERN.
-!- SUBCELLULAR LOCATION: NUCLEAR (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1211 QPQQGFLNAQMYAQRSRELLSHHFRQQRVAMMQQQQQQQQQQQQQQQQQQQQQQQQQQQQQQ

GENET. 8:221-228(1994).

-!- POLYMORPHISM: THE POLY-GLN REGION OF THE MACHADO-JOSEPH PROTEIN IS HIGHLY POLYMORPHIS. THE POLY-GLN REPEATS IN THE NORMAL POULLATION AND HIGHLY POLYMORPHIS. THE POLY SEASON ABOUT 68-82 REPEATS IN MJD1 PATIENTS. LONGER EXPANSIONS RESULT IN EARLIER ONSET AND MORE SEVERE CLINICAL MANIFESTATIONS OF THE DISEASE.

-!- DISEASE: DEFECTS IN MJD1 ARE THE CAUSE OF MACHADO-JOSEPH DISEASE (MJD), A NEURODEGENERATIVE DISORDER CHARACTERIZED BY CEREBELLAR ATAXIA, PYRAMIDAL AND EXTRAPYRAMIDAL SIGNS, PERIPHERAL NERVE PALSY, EXTERNAL OPHTALMOPLEGIA, FACILAL AND LINGUAL FASCICULATION AND BULGING. THIS DISEASE IS AUTOSOMAL AND DOMINANT, WITH A LATE ONSET OF SYMPTOMS, GENERALLY AFTER THE FOURTH DECADE.

GENERAL INFORMATION
APPLICANT: Ranum, Laura P.W.
APPLICANT: Ranum, Laura P.W.
APPLICANT: Ranum, Laura P.W.
TITLE OF INVENTION: Gene Sequence for Spinocerebellar;
Patent No. 5834183
TITLE OF INVENTION: Type 1 and Method for Diagnosis
NUMBER OF SEQUENCES: 85
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           COUNTRY: USAR

Patent No. 5834183
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Ranum, Laura P.W.
APPLICANT: Chung, Ming-y1
APPLICANT: 209hbi, Huda Y.
ITILE OF INVENTION: Gene Sequence for Spinocerebellar Ataxia
Patent No. 5834183
TITLE OF INVENTION: Type 1 and Method for Diagnosis
NUMBER OF SEQUENCES: 85
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match 1.5%; Score 68.4; DB 3; Length 506; Best Local Similarity 66.0%; Pred. New isolated steroid receptor co-activator, AIB1 - used to develop products for the diagnosis and treatment of steroid-responsive unouses, e.g. breast, lung, prostate or colon cancers or melanomas Claim 7; Page 25-30; 57pp; English.

The AIB1 protein is a member of the steroid receptor coactivator-1 (SCR-1) family of nuclear receptor co-activators that interact with estrogen receptors (ER) to enhance ER-dependent transcription.

The AIB1 polypeptide can be used to identify compounds which inhibit endicates aberrantly proliferating cells, thus detection of indicates aberrantly proliferating cells, thus detection of indicates aberrantly proliferating cells, thus detection of indicates aberrantly proliferating cells, thus detection of predisposition towards developing cancer. Compounds which inhibit composition of AIB1 on compounds which inhibit interaction of AIB1 or compounds which inhibit with steroid receptors or nuclear co-factors can be used for reducing the proliferation of cancer cells.

The AIB1 protein is a member of the steroid receptor coactivator-1 (SCR-1) family of nuclear receptor co-activators that interact with estrogen receptors (ER) to enhance ER-dependent transcription.

The AIB1 polypeptide can be used to identify compounds which inhibit ER-dependent transcription. Increased expression of the AIB1 gene an be used to identify compounds which inhibit ER-dependent transcription. Increased expression of the AIB1 gene can be used to diagnose cancer or a copies of the AIB1 gene can be used to diagnose cancer or a predisposition towards developing cancer. Compounds which inhibit expression of AIB1 or compounds which inhibit interaction of AIB1 catedual receptors or nuclear co-factors can be used for reducing the proliferation of cancer cells. This sequence is of the murine pCIP gene, a mouse ortholog of AIB1.

Claim 3; Fig 1; 100pp; English.

This sequence represents the nucleic acid encoding the mouse p/CIP
(p300/CBP/co-integrator-associated protein) polypeptide. The protein
can regulate gene expression so are potentially useful therapeutically,
eg. against (breast) cancer, inflammatory disease (e.g. atherosclerosis)
or osteoporosis.
